

## Address Institutional Barriers & build confidence

- ✿ *Barrier #1 - Worry glucose gel could mask serious hypoglycemia and delay IV glucose*
  - Strategy - Present the articles showing safety and effectiveness.
- ✿ *Barrier #2 - Nursing feeling this would be more burden to workflow*
  - Strategy - Embedding the algorithm in EMR and badge buddy for quick reference and identified unit champions each shift for support
- ✿ *Barrier #3 - Glucose gel not stocked, hard to access, or dose confusion*
  - Strategy - Include pharmacy team in go live and data review process
- ✿ *Barrier #4 - Inconsistent lactation Support*
  - Strategy - Trained lactation champions in each shift to assist with breast-feeding
- ✿ *Barrier #5 Leadership / Institutional approval delays*
  - Strategy - Involving unit and approval committee leadership
- ✿ *Barrier #6 - Staff may be skeptical about whether the intervention works in their hospital.*

- Strategy - Track metrics and share early wins in huddles or newsletters
- Use simple run charts or dashboards to visualize improvement
